

# The pagecolor package

H.-Martin Münch  
<Martin.Muench at Uni-Bonn.de>

2022-11-20 v1.1a

## Abstract

This L<sup>A</sup>T<sub>E</sub>X package provides the command `\thepagecolor`, which gives the current page (background) color, i.e. the argument used with the most recent call of `\pagecolor{...}`. The command `\thepagecolornone` gives the same color as `\thepagecolor`, except when the page background color is “none”. In that case `\thepagecolor` is `white` and `\thepagecolornone` is `none`.

When `\nopagecolor` is unknown or in case of the `crop` package broken, this package provides a replacement.

Similar to `\newgeometry` and `\restoregeometry` of the `geometry` package `\newpagecolor{<some color>}` and `\restorepagecolor` are provided.

## 1 Introduction

This L<sup>A</sup>T<sub>E</sub>X package provides the command `\thepagecolor`, which gives the current page (background) color, i.e. the argument used with the most recent call of `\pagecolor{...}`. (`\pagecolor` needs to be defined before by the `xcolor` or `color` package.) The `pagecolor` package should be loaded before any package sets a page (background) color, but obviously after the `xcolor` or `color` package. Its option `pagecolor={...}` is used to set the initial `\pagecolor{...}`.

The command `\thepagecolornone` gives the same color as `\thepagecolor`, except when the page background color is “none” (e.g. result of using the `\nopagecolor` command). In that case `\thepagecolor` is `white` and `\thepagecolornone` is `none`. When `\nopagecolor` is unknown or in case of the `crop` package broken, this package provides a replacement depending on option `nopagecolor`. Similar to `\newgeometry` and `\restoregeometry` of the `geometry` package `\newpagecolor{<some color>}` and `\restorepagecolor` are provided.

## 2 Usage

Just load the package placing

```
\usepackage[<options>]{pagecolor}
```

in the preamble of your L<sup>A</sup>T<sub>E</sub>X 2<sub>ε</sub> source file. This should be done before another package uses `\pagecolor`. Afterwards `\pagecolor{...}` can be used to change the page (background) color as usual. Then `\thepagecolor` gives the current page (background) color (in the same format as given with `\pagecolor{...}`).

Similar to `\newgeometry` and `\restoregeometry` of the `geometry` package

`\newpagecolor{<some color>}` and `\restorepagecolor` are provided:

`\newpagecolor{<some color>}` will execute `\pagecolor{<some color>}` and remember the page color used before. `\restorecolor` (without argument) restores the page color to the one used before use of the `\newpagecolor{...}` command. When you want to change the color for just one page and do not want to (or cannot) manually determine where that page ends,

```
\newpagecolor{<some color>}\afterpage{\restorepagecolor}
```

does the trick (and requires a `\usepackage{afterpage}` in the document’s preamble), or for short

```
\newcommand{\onepagecolor}[1]{%
```

```
\newpagecolor{#1}\afterpage{\restorepagecolor}}
```

in the preamble and

```
\onepagecolor{<some color>} in the document.
```

## 2.1 Options

**options**        The `pagecolor` package takes the following options:

### 2.1.1 `pagecolor`

**pagecolor**        The option `pagecolor={...}` takes as value a color. This could be as simple as `black` or `white`, but when e.g. the `xcolor` package is used (loaded before `pagecolor!`), also colors like `red!50!green!20!blue` are possible. The default is `pagecolor={none}`. A `\pagecolor{...}` command with the given color is used to initialise the `pagecolor`.

### 2.1.2 `nopagecolor`

**nopagecolor**        The option `nopagecolor={...}` takes as value a color. This could be as simple as `white` or `black`, but when e.g. the `xcolor` package is used (loaded before `pagecolor!`), also colors like `red!50!green!20!blue` are possible. The default is `nopagecolor={none}`. When `\nopagecolor` is unknown or broken (e.g. `crop` package) `\nopagecolor` is replaced by a `\pagecolor` command using the color defined with the `nopagecolor` option. If `\nopagecolor` is not available and `nopagecolor` is `none`, it is used `white` instead of `none`.

## 3 Alternatives

As I neither know what exactly you want to accomplish when using this package (e.g. hiding text), nor what resources you have (e.g. pdfTEX version), here is a list of possible alternatives:

- transparent package: With it some object can be made (fully or partially) transparent, <https://www.ctan.org/pkg/transparent>.
- OCG (Optional Content Groups): It allows for example to “hide” something when printing the document while keeping the layout, <https://www.ctan.org/search?phrase=ocg>.

You programmed or found another alternative, which is available at <https://www.CTAN.org/?> OK, send an e-mail to me with the name, location at CTAN, and a short notice, and I will probably include it in the list above.

## 4 Example

```
1 (*example)

105
106 \smallskip
107 {\color{red}\textbf{\lipsum[1-11]}}
108 \bigskip
109
110 The page color was changed back at the end of the page --
111 in mid-sentence!
112
113 \end{document}
114 \end{example}

```

## 5 The implementation

We start off by checking that we are loading into L<sup>A</sup>T<sub>E</sub>X 2<sub>ε</sub> and announcing the name and version of this package.

```
115 (*package)
116 \NeedsTeXFormat{LaTeX2e}[2021-11-15]
117 \ProvidesPackage{pagecolor}[2022-11-20 1.1a
118     Provides thepagecolor (HMM)]

    A short description of the pagecolor package:

119 %% Provides the \thepagecolor, \thepagecolornone, \newpagecolor{...},
120 %% and \restorepagecolor commands and a replacement for the
121 %% \nopagecolor command, if this is not available.
```

We want to wrap the messages nicely:

```
122 \RequirePackage{hardwrap}[2011/02/12]% v0.2
123 \GenerateLogMacros{package}{pagecolor}
124
```

We need the kvoptions package:

```
125 \RequirePackage{kvoptions}[2020-10-07]% v3.14

    and either the color or the xcolor package:

126 %% \RequirePackage{ either color or xcolor }:
127 \IfPackageLoadedTF{xcolor}{% xcolor loaded
128     \RequirePackage{xcolor}[2021/10/31]% v2.13
129 }{% xcolor not loaded
130     \IfPackageLoadedTF{color}{%
131         \RequirePackage{color}[2021/12/07]% v1.3c
132     }{\pagecolor@warning@noline{%
133         The pagecolor package must be loaded after either %
134         package color or after package xcolor (at your %
135         option). Neither package was loaded before package %
136         pagecolor. Loading of package xcolor will now be %
137         tried automatically. \\%
138         When the pagecolor package is used with option %
139         pagecolor using a color requiring e.g. x11names %
140         option for xcolor package, this will not work!%
141     }}
142 }
143 \RequirePackage{xcolor}[2021/10/31]% v2.13
144 }
145
```

We process the options:

```
146 \SetupKeyvalOptions{family=pagecolor,prefix=pagecolor@}
147 \DeclareStringOption[none]{pagecolor}% \pagecolor@pagecolor
148 \DeclareStringOption[none]{nopagecolor}% \pagecolor@nopagecolor
149 \ProcessKeyvalOptions*
150
```

`\nopagecolor` `\nopagecolor` is nowadays readily available. Let us test nevertheless:

```
151 \ifdefined\nopagecolor\relax
152 \else
153     \pagecolor@info@noline{\string\nopagecolor\ is undefined!}
154     \def\pagecolortmpb{none}
155     \edef\pagecolortmpa{\pagecolor@nopagecolor}
156     \ifx\pagecolortmpa\pagecolortmpb
```

```

157 \pagecolor@warning@noline{%
158   Option nopagecolor=none requested but \string\nopagecolor\ %
159   unknown: \\%
160   By option nopagecolor the "color" to be used with %
161   \string\nopagecolor\ %
162   is set. The current value is "none" (maybe by default), %
163   but command \string\nopagecolor\ is undefined. %
164   Therefore the color cannot be "none". %
165   Please change the option accordingly! - %
166   As first aid nopagecolor is now set to white.%
167 }
168 \setkeys{pagecolor}{nopagecolor=white}
169 \fi
170 \edef\pagecolortmpa{\pagecolor@pagecolor}
171 \ifx\pagecolortmpa\pagecolortmpb\relax
172 \pagecolor@warning@noline{%
173   Option pagecolor=none (maybe by default) used, %
174   but \string\nopagecolor\ is unknown. %
175   Please use another option value; %
176   \pagecolor@nopagecolor\ will be used now.%
177 }
178 \setkeys{pagecolor}{pagecolor={\pagecolor@nopagecolor}}
179 \fi
180 \newcommand{\nopagecolor}{\pagecolor{\pagecolor@nopagecolor}}
181 \fi
182
183

```

\pagecolor We save the original \pagecolor command,

```

184 \let\origpagecolor\pagecolor
185

```

before we redefine it to include a definition of \thepagecolor and \thepagecolornone:

```

186 \renewcommand{\pagecolor}[1]{\@bsphack%
187 \edef\pagecolortmpa{#1}%
188 \def\pagecolortmpb{none}%
189 \ifx\pagecolortmpa\pagecolortmpb\relax%
190 \ifdefined\nopagecolor\relax%
191 \nopagecolor%
192 \else%
193 \pagecolor@warning{%
194   pagecolor=none requested but \string\nopagecolor\ %
195   unknown: \\%
196   \string\pagecolor{none} was used, but the command %
197   \string\nopagecolor\ is undefined. %
198   Please use another color. \\%
199   pagecolor=\pagecolor@nopagecolor\ \\%
200   will be used now.%
201 }%
202 \xdef\thepagecolor{\pagecolor@nopagecolor}%
203 \xdef\thepagecolornone{\pagecolor@nopagecolor}%
204 % although it should be "none"
205 \origpagecolor{\pagecolor@nopagecolor}%
206 \fi%
207 \else%
208 \xdef\thepagecolor{#1}%
209 \xdef\thepagecolornone{#1}%
210 \origpagecolor{\thepagecolornone}%
211 \fi%
212 \@esphack%
213 }
214

```

`\nopagecolor` regularly is defined. If it was not, we already defined a replacement, see page 6. But additionally `\nopagecolor` does not work if the `crop` package is used. A workaround needs to be defined:

```

215 \let\orignopagecolor\nopagecolor\relax
216
217 \gdef\pagecolor@cl{0}
218 \IfPackageLoadedTF{crop}{% crop loaded
219   \gdef\pagecolor@cl{1}
220   \IfPackageAtLeastTF{crop}{2017/11/20}{
221     % later than 2017/11/19 v1.10 might be OK
222     \pagecolor@warning@noline{%
223       \string\nopagecolor\ did not work with package \\\%
224       crop 2017/11/19 v1.10. A newer version is used, %
225       which the pagecolor package does not know how to handle. %
226       Please contact the maintainer of the pagecolor package!%
227     }%
228     % Let us just hope everything got fixed:
229     \renewcommand{\nopagecolor}{%
230       \xdef\thepagecolor{white}%
231       \xdef\thepagecolornone{none}%
232       \orignopagecolor%
233       % That will not have any effect except when things got fixed!
234     }%
235   }{% else: older package version
236     \pagecolor@warning@noline{%
237       \string\nopagecolor\ does not work with %
238       the used crop package. Using \\\%
239       \pagecolor@nopagecolor\ \\\%
240       as nopagecolor now.%
241     }
242     \def\pagecolorortmpb{none}
243     \edef\pagecolorortmpa{\pagecolor@nopagecolor}
244     \ifx\pagecolorortmpa\pagecolorortmpb\relax
245       \pagecolor@warning@noline{%
246         Option nopagecolor=none requested %
247         but this does not work with the crop package. %
248         By option nopagecolor the "color" to be used with %
249         \string\nopagecolor\ %
250         is set. The current value is "none" (maybe by default), %
251         but the crop package broke \string\nopagecolor . %
252         Therefore the color cannot be "none". %
253         Please change the option accordingly! %
254         As first aid nopagecolor is now set to white.%
255       }
256       \setkeys{pagecolor}{nopagecolor=white}
257     \fi
258     \renewcommand{\nopagecolor}{\pagecolor{\pagecolor@nopagecolor}}
259   }
260 }{% crop not loaded
261   \ifdefined\nopagecolor\relax
262     \gdef\pagecolorortmpa{none}
263   \else
264     \gdef\pagecolorortmpa{\pagecolor@nopagecolor}
265   \fi
266   \renewcommand{\nopagecolor}{%
267     \xdef\thepagecolor{white}%
268     \xdef\thepagecolornone{\pagecolorortmpa}%
269     \orignopagecolor%
270   }
271 }
272
273

```

The (new) `\pagecolor` is now just carried out.

```
274 \pagecolor{\pagecolor@pagecolor}
275
```

Now the page (background) color as well as `\thepagecolor` are `\pagecolor@pagecolor`. `\thepagecolornone` is `none`, if that color is known, otherwise it is `\pagecolor@nopagecolor`, and if that was `none` (but that unknown), it is `white`. If `\pagecolor@pagecolor` was `none`, the page (background) color is `none`, when known, otherwise `\pagecolor@nopagecolor`, and if that was `none` (but that unknown), it is `white`, and `\thepagecolor` is `\pagecolor@nopagecolor`, and if that was also `none` but `none` unknown, then it is `white`. When the page (background) color is changed, `\thepagecolor` and `\thepagecolornone` are changed accordingly.

`\newpagecolor` There have been requests (via e-mail and at <https://tex.stackexchange.com/q/25137/6865>) to change the color of just one (or two) page(s) only, similar to `\newgeometry` and `\restoregeometry` of the geometry package (<https://www.ctan.org/pkg/geometry>). Therefore `\newpagecolor` and `\restorepagecolor` are introduced (as suggested by HAOYUN-TEX):

```
276 \newcommand{\newpagecolor}[1]{%
277 \xdef\pagecolortmpc{\thepagecolornone}%
278 \pagecolor{#1}%
279 }
280
```

`\newpagecolor{<some color>}` will execute `\pagecolor{some color}` and remember the page color used before.

`\restorepagecolor`

```
281 \newcommand{\restorepagecolor}{\pagecolor{\pagecolortmpc}}
282
```

`\restorecolor` (without argument) restores the page color to the one used before use of the `\newpagecolor{...}` command.

```
283 \gdef\pagecolortmpc{\thepagecolor}
284
```

is just a precaution for `\restorecolor` being used when no `\newpagecolor{...}` was used before it.

When you want to change the color for just one page and do not want to (or cannot) manually determine where the page ends,

`\newpagecolor{<some color>}\afterpage{\restorepagecolor}` does the trick (and requires an additional `\usepackage{afterpage}` in the document's preamble).

We checked whether the `crop` package had been loaded before the `pagecolor` package, but maybe it has been loaded afterwards. This is checked at the end of `\begin{document}`:

```
285 \AddToHook{begindocument/end}{%
286   \def\pagecolortmpb{0}%
287   \ifx\pagecolor@cl\pagecolortmpb\relax%
288     % crop not loaded before pagecolor, but maybe afterwards:
289     \IfPackageLoadedTF{crop}{% crop indeed loaded afterwards.
290       \gdef\pagecolor@cl{1}%

```

```

291 \IfPackageAtLeastTF{crop}{2017/11/20}{%
292   % later than 2017/11/19 v1.10 might be OK
293   \pagecolor@warning{%
294     \string\nopagecolor\ did not work with package \\\%
295     crop 2017/11/19 v1.10. A newer version is used, \%
296     which the pagecolor package does not know how to handle. \%
297     Please contact the maintainer of the pagecolor package!%
298   }%
299   % Let us just hope everything got fixed:
300   \renewcommand{\nopagecolor}{%
301     \xdef\thepagecolor{white}%
302     \xdef\thepagecolornone{none}%
303     \orignopagecolor%

312   }%
313   \def\pagecolortmpb{none}%
314   \edef\pagecolortmpa{\pagecolor@nopagecolor}%
315   \ifx\pagecolortmpa\pagecolortmpb%
316     \pagecolor@warning{%
317       Option nopagecolor=none requested \%
318       but this does not work with the crop package. \%
319       By option nopagecolor the "color" to be used with \%
320       \string\nopagecolor\ is set. The current value is "none" \%
321       (maybe by default), but the crop package broke \%
322       \string\nopagecolor . Therefore the color cannot be "none". \%
323       Please change the option accordingly! \\\%
324       As first aid nopagecolor is now set to white.%
325     }%
326     \setkeys{pagecolor}{nopagecolor=white}%
327   \fi%
328   \renewcommand{\nopagecolor}{\pagecolor{\pagecolor@nopagecolor}}%
329 }%
330 }{% crop neither loaded afterwards.
331 }%
332 \fi%
333 }
334
335 \end{package}

```

## 6 Installation

### 6.1 Downloads

Everything is available at <https://www.ctan.org>, but may need additional packages themselves.

`pagecolor.dtx` For unpacking the `pagecolor.dtx` file and constructing the documentation it is required:

- T<sub>E</sub>X Format L<sup>A</sup>T<sub>E</sub>X 2<sub>ε</sub> 2021-11-15 or newer: <https://www.CTAN.org>
- document class `ltxdoc`, 2020/12/05, v2.1b, <https://www.ctan.org/pkg/ltxdoc>
- package `hltxdoc`, 2019/12/09, v0.30, <https://www.ctan.org/pkg/hltxdoc>

`pagecolor.sty` The `pagecolor.sty` for L<sup>A</sup>T<sub>E</sub>X 2<sub>ε</sub> (i.e. each document using the `pagecolor` package) requires:

- T<sub>E</sub>X Format L<sup>A</sup>T<sub>E</sub>X 2<sub>ε</sub> 2021-11-15 or newer, <https://www.CTAN.org>
  - package `hardwrap`, 2011/02/12, v0.2, <https://www.ctan.org/pkg/hardwrap>
  - package `kvoptions`, 2020-10-07, v3.14, <https://www.ctan.org/pkg/kvoptions>
- and either
- package `xcolor`, 2021/10/31, v2.13, <https://www.ctan.org/pkg/xcolor>

or

- package `color`, 2021/12/07, v1.3c, <https://www.ctan.org/pkg/color> (from the `graphics` package bundle).

`pagecolor-example.tex` The `pagecolor-example.tex` requires the same file as all documents using the `pagecolor` package, i.e.

- package `pagecolor`, 2022-11-20, v1.1a, <https://www.ctan.org/pkg/pagecolor>  
(Well, it is the example file for this package, and because you are reading the documentation for the `pagecolor` package, it can be assumed that you already have some version of it – is it the current one?)

and additionally:

- class `article`, 2021/10/04, v1.4n, from classes:  
<https://www.ctan.org/pkg/classes>
- package `xcolor`, 2021/10/31, v2.13, <https://www.ctan.org/pkg/xcolor>  
This package would not be needed for the use of just base colors only, the `color` package would be sufficient for that.
- package `afterpage`, 2014/10/28, v1.08, <https://www.ctan.org/pkg/afterpage>  
This package is only needed for demonstrating the `\newpagecolor{somecolor}\afterpage{\restorepagecolor}` construct.
- package `lipsum`, 2021-09-20, v2.7, <https://www.ctan.org/pkg/lipsum>  
This package is only needed for some blind text.

**Alternatives** As possible alternatives in section 3, Alternatives, there are listed (newer versions might be available):

**transparent**  
**OCG**

- package `transparent`, 2022-10-27, v1.5,  
<https://www.ctan.org/pkg/transparent>
- OCG (Optional Content Groups),  
<https://www.ctan.org/search?phrase=ocg>

**Oberdiek** All packages of the ‘oberdiek’ bundle (especially `hltxdoc` and `kvoptions`) are also available in a TDS compliant ZIP archive:  
**holtxdoc** <https://mirror.ctan.org/install/macros/latex/contrib/oberdiek.tds.zip>.  
**kvoptions** It is probably best to download and use this, because the packages in there are quite probably both recent and compatible among themselves.

**hyperref** `hyperref` is not included in that bundle and needs to be downloaded separately, <https://mirror.ctan.org/install/macros/latex/contrib/hyperref.tds.zip>.

**Münch** A hyperlinked list of my (other) packages can be found at <https://www.ctan.org/author/muench-hm>.

## 6.2 Package, unpacking TDS

**Package.** This package is available on <https://www.CTAN.org>.

<https://mirror.ctan.org/macros/latex/contrib/pagecolor/pagecolor.dtx>  
 The source file.

<https://mirror.ctan.org/macros/latex/contrib/pagecolor/pagecolor.pdf>  
 The documentation.

<https://mirror.ctan.org/macros/latex/contrib/pagecolor/pagecolor-example.pdf>  
 The compiled example file, as it should look like.

<https://mirror.ctan.org/macros/latex/contrib/pagecolor/README>  
 The README file.

There is also a `pagecolor.tds.zip` available:

<https://mirror.ctan.org/install/macros/latex/contrib/pagecolor.tds.zip>  
 Everything in TDS compliant, compiled format.

which additionally contains

<code>pagecolor.ins</code>	The installation file.
<code>pagecolor.drv</code>	The driver to generate the documentation.
<code>pagecolor.sty</code>	The <code>.style</code> file.
<code>pagecolor-example.tex</code>	The example file.

For required other packages, please see the preceding subsection.

**Unpacking.** The `.dtx` file is a self-extracting `docstrip` archive. The files are extracted by running the `..dtx` through plain  $\text{T}_\text{E}\text{X}$ :

```
tex pagecolor.dtx
```

About generating the documentation see paragraph 6.4 below.

**TDS.** Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

<code>pagecolor.sty</code>	→ <code>tex/latex/pagecolor/pagecolor.sty</code>
<code>pagecolor.pdf</code>	→ <code>doc/latex/pagecolor/pagecolor.pdf</code>
<code>pagecolor-example.tex</code>	→ <code>doc/latex/pagecolor/pagecolor-example.tex</code>
<code>pagecolor-example.pdf</code>	→ <code>doc/latex/pagecolor/pagecolor-example.pdf</code>
<code>pagecolor.dtx</code>	→ <code>source/latex/pagecolor/pagecolor.dtx</code>

If you have a `docstrip.cfg` that configures and enables `docstrip`’s TDS installing feature, then some files can already be in the right place, see the documentation of `docstrip`.

### 6.3 Refresh file name databases

If your  $\text{T}_{\text{E}}\text{X}$  distribution ( $\text{T}_{\text{E}}\text{X}$  Live,  $\text{MiK}_{\text{T}}\text{E}_{\text{X}}$ ,  $\text{t}_{\text{e}}\text{T}_{\text{E}}\text{X}$ , ...) relies on file name databases, you must refresh these. For example,  $\text{t}_{\text{e}}\text{T}_{\text{E}}\text{X}$  users run `texhash` or `mktextlsr`.

### 6.4 Some details for the interested

**Unpacking with  $\text{L}^{\text{A}}\text{T}_{\text{E}}\text{X}$ .** The `.dtx` chooses its action depending on the format:

**plain  $\text{T}_{\text{E}}\text{X}$ :** Run `docstrip` and extract the files.

**$\text{L}^{\text{A}}\text{T}_{\text{E}}\text{X}$ :** Generate the documentation.

If you insist on using  $\text{L}^{\text{A}}\text{T}_{\text{E}}\text{X}$  for `docstrip` (really, `docstrip` does not need  $\text{L}^{\text{A}}\text{T}_{\text{E}}\text{X}$ ), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{pagecolor.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

**Generating the documentation.** You can use both the `.dtx` or the `.drv` to generate the documentation. The process can be configured by a configuration file `ltxdoc.cfg`. For instance, put the following line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with `pdf $\text{L}^{\text{A}}\text{T}_{\text{E}}\text{X}$` :

```
pdflatex pagecolor.dtx
makeindex -s gind.ist pagecolor.idx
pdflatex pagecolor.dtx
makeindex -s gind.ist pagecolor.idx
pdflatex pagecolor.dtx
```

### 6.5 Compiling the example

The example file, `pagecolor-example.tex`, can be compiled via `(pdf)latex pagecolor-example.tex`.

## 7 Acknowledgements

I would like to thank HEIKO OBERDIEK for providing a lot of useful packages (from which I also got everything I know about creating a file in `.dtx` format, ok, say it: copying), and the `news:comp.text.tex` and `news:de.comp.text.tex` newsgroups for their help in all things  $\text{T}_{\text{E}}\text{X}$ , especially all contributors to the discussion at <https://groups.google.com/g/comp.text.tex/c/UzV26-RNYPY> (H. OBERDIEK & GOUAILLES).

I thank HAOYUN-TEX for suggesting the `\newpagecolor`/`\restorepagecolor` pair of commands and everyone at <https://tex.stackexchange.com/q/25137/6865> for their contributions there. Thanks go to HEINER RICHTER for finding a bug, to JOHANNES BÖTTCHER for reporting it, and to REUBEN THOMAS for suggestions for improvements of this documentation.

## 8 History

[2011/07/16 v1.0a]

- First version discussed at [news:comp.text.tex](#).

[2011/08/06 v1.0b]

- Changed version uploaded to the CTAN.

[2011/08/08 v1.0c]

- Fixed a `\setkeys`.

[2012/02/01 v1.0d]

- Bugfix: Obsolete installation path given in the documentation, updated.
- New commands: `\newpagecolor{...}`, `\restorepagecolor`.
- Update of documentation, README, and `dtx` internals.

[2012/02/23 v1.0e]

- Fixed an error in the documentation.
- Check for loading of `color` or `xcolor` package and their versions has been changed, because `xcolor` sets `\@namedef{ver@color.sty}{1999/02/16}` which gave a warning about old `color` package even if a new version was used.

[2015/06/21 v1.0f]

- Fixed the urls in the documentation.
- Handle `\nopagecolor` when it is not defined or broken by `crop`, new option `nopagecolor` introduced.
- Update of documentation, README, and `dtx` internals.

[2015/06/22 v1.0g]

- Replaced all error messages by warnings.

[2015/08/30 v1.0h]

- Bugfix: Checking for `crop` package done `\AtBeginDocument`, but some of the related code must already be performed earlier. Bug found by HEINER RICHTER and reported by JOHANNES BÖTTCHER, thanks!
- This version has been archived at <https://web.archive.org/web/20161114093809/https://mirror.ctan.org/install/macros/latex/contrib/pagecolor.tds.zip>

[2017/05/29 v1.0i]

- Documentation update following suggestions for improvements by REUBEN THOMAS, thanks!
- This version has been archived at <https://web.archive.org/web/20220120221237/https://mirror.ctan.org/install/macros/latex/contrib/pagecolor.tds.zip>

[2022-11-20 v1.1a]

- Conversion to UTF-8.
- Update to L<sup>A</sup>T<sub>E</sub>X format 2021-11-15.
- Corrected an error in the example.
- X<sub>Y</sub>L<sup>A</sup>T<sub>E</sub>X and others now do know `\nopagecolor`.
- Package `crop` has been updated, but `\nopagecolor` still applies to the physical background sheet instead of the logical foreground area.
- Now using the `hardwrap` package.
- Documentation updates.

When you find a mistake or have a suggestion for an improvement of this package, please send an e-mail to the maintainer, thanks! (Please see BUG REPORTS in the README.)

## 9 Index

Numbers written in *italic* refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; plain numbers refer to the code lines where the entry is used.
