DOCUMENTATION

Section 1

THE TUDABEAMER CLASS

- Basic usage identical to beamer
- No special syntax required

ADDITIONAL FEATURES FOR TITLEGRAPHIC/LOGOS

- `\partnerlogo` additional logo next to TUDa logo
- `\sublogo` additional logo below TUDa logo
- `\titlegraphic` place image as a background for title slide

The additional option `authorontitle=true/false` allows to place author/institute below the title.

SCALING LOGOS/TITLEGRAPHIC

- The commands shown on previous slide support `\height/\width` to adjust the size to be used for graphic scaling.
- All have a starred variant (e. g. `\sublogo*{\includegraphics{example-image}}\)`. This will automaticcaly scale/clip the logo/image to desired size.

TABLE OF CONTENTS

By design the toc is structured in two columns. This layout doesn't really support subsections or subsubsections.

To be able to use the new design with old content, the mechanism was extended to support those. This will automatically switch to a single columns toc.

In case you want to disable that mechanism there is the class option `toc-columns=one/two/auto` which can also be adjusted locally by directly setting it with the command: `\tableofcontents[columns=two]`.

Please be also aware of beamer's mechanism to filter the toc, e.g. by `\tableofcontents[hideallsubsections]`, see the beamer documentation for details.

FRAME WITH A SUBTITLE

SUBTITLE

An example.

test

COLOR SCHEME

The new design introduces new colors to be used to highlight content.

The additional colors are:

TUDa-dark1: 

TUDa-dark2: 

TUDa-light1: 

TUDa-light2: 

TUDa-accent1: 

TUDa-accent2: 

TUDa-accent3: 

TUDa-accent4: 

TUDa-accent5: 

TUDa-accent5: 

TUDa-hyperlink: 

REMARK ON VERTICAL ALIGNMENT (ESPECIALLY COLUMNS)

The default alignment has been changed from c to t in contrast to beamers default setting. This means frame content will be aligned top inside the frame. This is required by the design but might have side effects with the columns environment:

To resolve this one can either globally add the c option or pass the option to the columns environment, e. g.:

- one
- two
