mlr_learners_clust.fanny

Fuzzy Analysis Clustering Learner

Description

A **LearnerClust** for fuzzy clustering implemented in `cluster::fanny()`. `cluster::fanny()` doesn't have a default value for the number of clusters. The `predict` does not work for new data.

partition (integer())
  Access the stored partition.
prob (matrix())
  Access to the stored probabilities.
```

Methods

prob ([matrix\(\)](#))

Numeric matrix of cluster membership probabilities with one column for each cluster and one row for each observation. Columns must be named with cluster numbers, row names are automatically removed.
