NAME

bibzbladd.pl − add Zbl numbers to papers in a given bib file

SYNOPSIS

bibzbladd [−d] [**−f**] [**−e** 1|0] [**−o** *output*] *bib_file*

OPTIONS

−d Debug mode

−e If 1 (default), add an empty zblnumber if a zbl cannot be found. This prevents repeated searches for the same entries if you add new entries to the file. Calling −e 0 suppresses this behavior.

−f Force searching for Zbl numbers even if the entry already has one.

−o *output*

Output file. If this option is not used, the name for the output file is formed by adding `_zbl` to the input file

DESCRIPTION

The script reads a BibTeX file. It checks whether the entries have Zbls. If not, it tries to find the numbers from Internet sites. The result is a BibTeX file with `zblnumber=...` fields added.

The name of the output file is either set by the **−o** option or is derived by adding the suffix `_zbl` to the output file.

See the `bibdoiadd` script for more details on the processing.
